This event aims to provide GPs with a comprehensive update on vascular care, including advancements, diagnosis, referral and treatment to support both GPs and patients to achieve best outcomes.

Our expert team of vascular surgeons will discuss:

- Peripheral Vascular Disease
- Geniculate Artery Embolization
- Endovascular Revolution for the Treatment of Aortic Diseases

Host

Dr Pecky De Silva *BSc (Med), MBBS, FRACS (Vasc)*
Vascular Surgeon

Dr Pecky (Upeksha) De Silva is a vascular and endovascular surgeon. She is Vascular, Head of Department at Sydney Adventist Hospital.

Dr De Silva provides all vascular and endovascular treatment and has a special interest in varicose veins and ulcers and peripheral vascular disease, especially in diabetes and arterio-venous fistular creation and management.

Speakers

Dr Saissan Rajendran *MBBS, GDAAD, MS (Vasc), FRACS (Vasc), DDU*
Vascular Surgeon

Dr Saissan Rajendran is a Sydney based vascular and endovascular surgeon. Some of his special interests include: endovascular and surgical management of aortic, peripheral and visceral aneurysms; endovascular, open and hybrid management of complex peripheral artery disease; and diabetic foot disease infections and vascular complications. Dr Rajendran is passionate about collaborative patient care and takes a multidisciplinary approach with strong communication and partnerships between all medical professionals to optimise patient outcomes.

Dr Tae Cho *MBBS, BSc (Med), FRACS (Vascular)*
Vascular Surgeon

Dr Tae Cho is a vascular surgeon with particular interest in minimally invasive aortic surgery. He is currently a Proctor for Medtronic for their aortic stent grafts in Australia and Asia. His research interests include complex endovascular aortic surgery but also endoluminal treatment of occlusive aortoiliac disease.

Dr Vikram Puttaswamy *FRACS (Vascular), FRACS (General)*
Vascular Surgeon

Dr Vikram Puttaswamy is a vascular surgeon who specialises in major and complex endovascular and vascular surgical procedures. Dr Puttaswamy's research interests include: Lower limb bypass using new prosthetic grafts; complex thoracic and abdominal aortic aneurysm using endovascular grafts; venous and embolectomy for DVT; and the use of stents for lower limb revascularisation.
